

VAIBHAV KUMAR

FULL STACK DEVELOPER

Results-driven Full Stack Developer with 5+ years of experience building scalable, secure, high-performance applications using Java, Kotlin, Spring Boot, Angular, React and Microservices. Delivers end-to-end web solutions across Healthcare, Insurance and E-commerce domains, combining strong backend engineering with modern front-end development.

vaibhav661998@gmail.com | +91 9643845579 | linkedin.com/in/vaibhav-kumar-9b9aba185 | India

TECHNICAL SKILLS

Languages
Java, Kotlin, JavaScript, TypeScript, SQL

Backend
Spring Boot, Spring Framework, Microservices, REST APIs, Hibernate, JPA, Design Patterns

Frontend
Angular, React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

Databases
MySQL, PostgreSQL, MongoDB

Cloud & DevOps
AWS, Docker, Kubernetes, Jenkins, CI/CD

Messaging & Integration
Kafka, OAuth2, SSO, GraphQL

Build & Tools
Maven, Gradle, Git, SonarQube, New Relic, Redis, Elasticsearch, Postman, Swagger

Testing
JUnit, Mockito, MockK, Integration Testing

Core CS
Data Structures & Algorithms (DSA)

EDUCATION

B.Tech in Computer Science
UIET, Kurukshetra University, Kurukshetra
2021 | CGPA: 7.8/10

CERTIFICATIONS

- Internship – Cloud Analogy
- Java Certification – DUCAT, Noida
- Web Development – Udemy

CORE STRENGTHS

- Full Stack Development (Java + Modern JS Frameworks)
- Problem Solving & Analytical Thinking
- System Design & Architecture
- Clean Code & Best Practices
- Agile & Collaborative Work Environment
- Continuous Learning & Improvement

PROFESSIONAL EXPERIENCE

Senior Software Engineer
Jan 2024 – Present

Personify Health
Healthcare, Insurance, Benefits Administration

- Designed and developed scalable full stack features using Kotlin, Spring Boot, Angular and React for healthcare and insurance platforms.
- Developed and maintained REST APIs consumed by member-facing and administrative front-end portals.
- Implemented end-to-end features for benefits management, COBRA programs and Digital ID Cards, spanning backend services and UI.
- Integrated secure authentication flows using OAuth2 and SSO (SP-initiated and IdP-initiated).
- Optimized database queries and improved API performance and reliability.
- Built comprehensive unit and integration tests using JUnit, Mockito and MockK.
- Collaborated with cross-functional teams in an Agile environment to deliver high-quality full stack solutions.

Software Engineer
Sep 2021 – Jan 2024

Moglix Labs Pvt Ltd (moglix.com)
E-commerce / Supply Chain

- Worked on an Order Management System handling the end-to-end order lifecycle across backend and integrated front-end workflows.
- Developed and consumed RESTful APIs for multiple internal and external integrations.
- Built microservices using Java and Spring Boot to support scalable order processing.
- Designed and implemented business logic for order processing, tracking and fulfillment.
- Used MySQL and PostgreSQL for data storage and optimization.
- Implemented Kafka for event-driven communication between services.
- Participated in code reviews, sprint planning and continuous delivery.

PROJECTS

1. Inventory Management System
Java, Spring Boot, Angular, React, MySQL, Data Structures & Algorithms

- Developed a full-stack web application to manage inventory operations end to end.
- Built features including stock tracking, product management, supplier management, low-stock alerts and detailed reports.
- Built REST APIs using Java Spring Boot, with Angular and React front ends for the user interface.
- Stored and managed data in MySQL with optimized queries.
- Applied data structures and algorithms (hash maps, sorting and searching) for fast stock lookups, low-stock detection and report generation.

2. Real-Time Chat & Notification System
Java, Spring Boot, WebSocket, Kafka, Redis, Angular, React, MySQL, Data Structures & Algorithms

- Built a real-time one-to-one and group chat platform using WebSocket (STOMP) for bidirectional communication.
- Designed an event-driven notification pipeline with Kafka for message delivery, read receipts and presence updates.
- Used Redis for session management and presence tracking, and to cache recent conversations for low-latency access.
- Built responsive Angular and React UIs with typing indicators, unread counts and MySQL-backed, paginated chat history.
- Applied data structures and algorithms (queues, hash maps and efficient search) for message ordering, presence tracking and fast conversation lookups.

ACHIEVEMENTS

- Improved API performance by optimizing database queries, reducing response time by ~30%.
- Implemented SSO integration, improving user authentication experience and security.
- Actively contributed to multiple production releases with zero critical defects.
- Recognized for writing clean, maintainable code and helping teammates resolve complex issues.

ADDITIONAL INFORMATION

Languages: English, Hindi
Frameworks: Spring Boot, Angular, React.js
Methodologies: Agile, Scrum
Version Control: Git
IDE / Tools: IntelliJ IDEA, VS Code, Postman, Swagger
